     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB

Sequence 3, Application US/09178109
Patent No. 6395477
GENERAL INFORMATION:
APPLICANT: Cockett, Mark I.
APPLICANT: Chang Ling, Huai-Ping
APPLICANT: Chang Ling, Huai-Ping
APPLICANT: Chang Ling, Huai-Ping
APPLICANT: Sokol, Patricia T.
TITLE OF INVENTION: Human Potassium Channel Polynucleotides and
TITLE OF INVENTION: Polypeptides and Uses Therefor
FILE REFERENCS: ahp-98089
CURRENT APPLICATION NUMBER: US/09/178,109

## Sequence 957, Application US/09949016

## Patent No. 6812339

## GENERAL INFORMATION:

## APPLICANT: VENTER, J. Craig et al.

## TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

## TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

## FILE REFERENCE: CL001307

## CURRENT APPLICATION NUMBER: US/09/949,016

## CURRENT FILING DATE: 2000-04-14

## PRIOR APPLICATION NUMBER: 60/241,755

## PRIOR APPLICATION NUMBER: 60/237,768

## PRIOR APPLICATION NUMBER: 60/237,768

## PRIOR APPLICATION NUMBER: 60/231,498

## PRIOR FILING DATE: 2000-10-03

## PRIOR APPLICATION NUMBER: 60/231,498

## PRIOR FILING DATE: 2000-09-08

## NUMBER OF SEQ ID NOS: 207012

## SOFTWARE: FastSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
Sequence 12066, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS
FILE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: US/09/949,016
                                                                                                                                                                                                                             1387
                                                                                                                                                                                                                                                                                                                                                                                                               1177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1087
                                                                                                                                                                                                                                                                                                                                         1237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      997

The present sequence is that of cDNA encoding the long isoform of novel

Claim 5; Col 15-18; 19pp; English.

New isolated polynucleotide encoding human Kv4.3 potassium channel polypeptide, useful as probe in a diagnostic method for detecting acid encoding human Kv4.3, and for treating Alzheimer's and heart

nucleic

To obtain the cDNA, oligonucleotides based cc on the published rat sequence were used to screen a whole heart cDNA library. A 511 bp fragment was obtained and used as a probe to rescreen cc the library. The resulting clones lacked the extreme 5' and 3' coding cregions, and 5' and 3' RACE was therefore used to amplify these sequences from a human brainstem cDNA library. 2 Isoforms of human Kv4.3 were cc identified. One form is full-length (hKv4.3 long) while the second form cc has a deletion of 19 amino acids in the carboxy domain after the predicted sixth transmembrane domain (hKv4.3 short). Human heart cc primarily expresses hKv4.3 long, whereas human brain contains both forms. CC The invention provides Kv4.3 polypeptides, polynucleotides, and methods cf invention provides Kv4.3 polypeptides, and methods collinated these polynucleotides. The kv4.3 polypeptides and cc polynucleotides are useful in the diagnosis, treatment and screening of human diseases relating to an excess or deficiency of hKv4.3 activity, including Alzheimer's disease and heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
